

DIRECTABLE EXHAUST FOR WATER SPORT TOW BOAT

ABSTRACT OF THE DISCLOSURE

The directable exhaust for a wake surfing power boat permits directing
5 exhaust out of either the port or starboard side of a boat opposite the wake wave on
which a wake surfer is surfing to avoid exposure of the person to the exhaust fumes.
Valves which direct the exhaust out of the side of the boat are linked such that the
exhaust can be directed out of either the port or starboard side of the boat away
from the wake surfer by a single control available to the boat operator.
